www.spica.hr

FUNCTIONALITIES

- Accurate and fast inventory of fixed assets
- Data archive for assets
- Assets ordering requests
- Regular maintenance and servicing
- Integration with accounting
- User administration
- Analytics and statistics
- Activity history

WHY ADVANTAS?

Displays the actual assets status •
Automates the inventory process •
Reduces maintenance costs •
Extends the lifespan of assets •
Increases productivity •

Data about your fixed assets

For each fixed asset, data is entered that determines its group, which can be either financial group such as asset class, cost center, employee using it or physical group of data such as location, floor, building, business center.

In addition to the basic data, Advantas allows input, storage, and search of various additional data and documents related to a specific asset, such as purchase invoices, photographs, geolocation, service documents (service request, work order), transfer orders, warranty certificates and many more.

Simple and accurate inventory of fixed assets

By using Advantas and handheld terminals or mobile devices with barcode or RFID tags for marking locations and fixed assets, the inventory of fixed assets becomes a simple, fast and accurate business process.

Maintenance and servicing of fixed assets

Periodic maintenance of assets, service request management, work orders with tasks and service activities are advanced functionalities of Advantas that extend the useful life, improve the quality of asset utilization and contribute to increasing company productivity.

Advanced reporting and statistics system

Advantas enables the creation of business analytics and graphical representations of various reports. By using the report generator, our team of experts can customize reporting to meet the needs of your business processes.

Integration with accounting software

Advantas allows integration with accounting software by using data exchange modules with existing business systems or by implementing an application programming interface (API).

Activity history

Advantas records and archives all events related to fixed assets, as well as any other activities that occur during users' interactions with the web-based platform or Android clients.
